Alfalfa

Alfalfa (or Lucerne) is often called the “Queen of forages” and is commonly used for dairy cattle, horses, camels, and beef cattle. It has the highest yield potential and one of the highest feeding values of all adapted perennial forage legumes.

Our Alfalfa has high protein and calcium content and highly digestible fiber. The anaerobic fermentation allows Alfalfa to retain high nutrient levels similar to those of fresh forage. Alfalfa is high in protein, calcium, plus other mineral and vitamins A, B, C, D, E and K.

Alfalfa for Animal Feeds

Dairy Industry – Saudi Arabia

Saudi Arabian dairy is truly a success story. It operates some of the biggest and highly efficient dairy operations in the Region. In the desert like conditions, where the temperatures soar 50°C is among unlikely candidate as a top 10 dairy producer on the planet. It employs an industry standard known as the “California model”. You don’t grow your all your grass and raise your own feed crops, you import feed and water and all your input and house hundreds of thousands of dairy cattle in 40 acres of land.

In 1977, in Saudi Arabia, it began with just 300 head of cattle and now house over 200,000 herds one of the largest and most productive systems. Its statistics are staggering. The entire herd produces more than 2.5 million liters/day and average of 40 liters/cow/day roughly double the European average.

For any operation of such magnitude, dairy feed is a very critical component of its success. Our Supplier has more than 20 years of working and succeeding with the “California model” dairy farmers of California. We understand the dairy feed business and dairy farmers’ requirements for healthy and productive dairy cows. Our supplier

works diligently with the farmer to provide excellent quality Alfalfa that is high in protein and nutrients.

Our supplier takes pride in their products by working very closely with their customers regularly to ensure the feed is meeting their dairy feed expectations. They work with the farm operations management to constantly monitor and improve efficiency. They work with veterinarian and nutritionist to monitor the health and productivity of the heard.

Our preferred Alfalfa (Single Compressed 400kg and 450kg bales) consists of:

- It is leafy which is good for chewing.
- Very high in protein, ADF and NDF
- Excellent fodder for dairy cows

Alfalfa as an animal feed is different for camels, horses and goats. For camels the Alfalfa does not have to be leafy. Individual bales are broken and shaken to remove the leaves. The stem as a feed is very important for the camel. Single Compressed 42kg and 45kg bales are the preferred size of bales for camels.

Specifications

- Purity- 92 %
- Moisture -12 %
- Crude protein: 18-22 %
- A D F- 35 % Max in Dry Matter Basis
- N D F - 40 % Max Dry Matter Basis
- Aflatoxin - 10 ppb Max
- Not mix with grass , Green Colour hay
- Size 350 K G per candles

Compressed Bales

Our forage products are compressed into bales for easy and efficient handling. The supplier's State of the Art facilities allows them to efficiently process forage crops to give consumer maximum return on investment.

The production facility is equipped with 2 self-designed , patented press.

Jumbo Bale Press

The press is set up to accept chopped product to produce a 430kg compressed bale in a sleeve. The custom bales are preferred by many large farms and incorporate these bales into total mixed rations (TMR). The facility is set up to allow for the mixing of product to create custom blends for timothy and alfalfa.

Beg Bale Press

The Big bale press is designed to accept 4x4 or 3x4 bales. The bales are sliced and compressed in a fully automated press that is capable of producing at a rate up to 24 metric tons per hour. Output bales are cut into smaller bales through a cutter box to the size preferred by the end customer.

Bale sizes

Jumbo bale: 420-430kg

Small bales: 30kg, 40, kg, 60kg & 120 kg

Through the state of the art compression technologies, the supplier is able to load up to 26 metric tons per 40' container. This leads to lower costs for the customer because of the ability to maximize the volume per container.
